INSERTING DATA IN TABLES

The screenshot displays the Postman interface for a REST client. The top bar includes the 'work' tab, 'Explore' search, and various utility buttons like 'Invite', 'Settings', 'Notifications', and 'Upgrade'. The main workspace shows a selected request with the URL `http://127.0.0.1:8000/insert/` and the method `POST`. The request body is a JSON object: `{ "clientId": "123456", "clientData": {} }`. The response pane at the bottom shows a `200 OK` status with a response time of `225 ms` and a body of `{ "message": "Data inserted successfully" }`. The interface is organized into tabs for 'Params', 'Authorization', 'Headers (9)', 'Body', 'Pre-request Script', 'Tests', and 'Settings'. The 'Body' tab is active, showing the request and response in a 'Pretty' JSON format.
